October is Breast Awareness Month Schedule your patient today

HOLOGIC SELENIA DIGITAL MAMMOGRAM WITH CAD (COMPUTER-AIDED DECTECTION)

Our new **digital mammogram**, which is **accredited by the American College of Radiology**, will be able to identify regions of interest and bring them to the attention of the radiologist, helping to decrease false negative readings. The Hologic Selenia features a **selenium-based direct capture technology** that eliminates light diffusion completely, providing perfect clarity and exquisite image quality. It can help detect cancer up to 2 years before it can be found by physical examination. All our mammograms are read by board-certified radiologists/mammographers with many years of experience in reading screening and diagnostic mammography (both film screen and digital mammography), some with **fellowship training in breast imaging**.

BREAST BIOPSY NOW AVAILABLE

Advanced Imaging Center is proud to announce the cutting-edge **ATEC Biopsy system**. This **vacuum-assisted breast biopsy** system has been designed for compassionate patient care, confident clinical results, and essential elements in minimally invasive breast biopsy. The ATEC is fast (Tissue acquisition occurs every 4.5 seconds, typically lasting less than 30 seconds total). It is compatible with **ultrasound- and MR-guided biopsies**. Easily delivers local anesthetic without interruption. Combination of saline lavage and constant aspiration helps ensure a core with every cycle. **One entry only and up to six cores received for processing**. Your patients will appreciate this system.

We can schedule your patients today. We always make sure all past outside exams are obtained for comparison with the new scan, so there won't be any loss in continuity of care.

Please don't hesitate to call with any questions
